OVERVIEW OF VIRTUAL MACHINES

VM and necessary resources

PLANNING FOR AZURE VMs

VM sizes

Type	Sizes	Description
General purpose	B, Dsv3, Dv3, DSv2, Dv2, Av2	Balanced CPU-to-memory ratio. Ideal for testing and development, small to medium databases, and low to medium traffic web servers.
Compute optimized	Fsv2, Fs, F	High CPU-to-memory ratio. Good for medium traffic web servers, network appliances, batch processes, and application servers.
Memory optimized	Esv3, Ev3, M, GS, G, DSv2, Dv2	High memory-to-CPU ratio. Great for relational database servers, medium to large caches, and in-memory analytics.
Storage optimized	Ls	High disk throughput and IO. Ideal for Big Data, SQL, and NoSQL databases.
GPU	NV, NVv2, NC, NCv2, NCv3, ND	Specialized virtual machines targeted for heavy graphic rendering and video editing, as well as model training and inferencing (ND) with deep learning. Available with single or multiple GPUs.
High performance compute	H	Our fastest and most powerful CPU virtual machines with optional high-throughput network interfaces (RDMA).

What should be considered in case of design a VM

1. SLA
 - Is Availability Set needed
 - Disk(s) type (SSD, HDD, Manage Disk)
2. What software do you plan to use
 - VM Size
 - OS Type
3. Do you need to provide HA
 - VM or VMSS
 - Load Balancer
4. Do you have your own license(s) (OS, software)
 - Use option "Bring your own license"
5. How long so you plan to use VM(s)
 - Billing option (Pay as you go, Reserved VMs)
6. For what environment (DEV, SIT, PROD) do you need to utilize VM(s)
 - VM size category (General Purpose, Compute optimized and etc.)
 - Disk(s) type (SSD, HDD, Manage Disk)
7. How often do you plan to change VM settings, increase count
 - Deployment method (ARM, PowerShell, Portal and etc.)
8. How many network interfaces do you need
 - VM Size
9. Do you need to provide access to VM from the Internet
 - Load Balancer
 - NSG
 - Public IP

DISKS

Types of disks

1. Standard HDD disks (Managed and Unmanaged)
2. Standard SSD disks (Managed only)
3. Premium SSD disks (Managed and Unmanaged)
4. Ultra SSD disks (Managed only)

Unmanaged disks

- **Low-cost**

Managed disks

- **Simple and scalable VM deployment**
- **Better reliability for Availability Sets**
- **Highly durable and available**
- **Granular access control**
- **Azure Backup service support**

VS.

Disk sub-system

- Attach OS or data disk
 - New (empty)
 - Existing blob
 - Blob snapshot (managed disks)
- Detach
- Temporary disk (D:\ or /dev/sdb)
- Modify disk settings
 - Caching mode (none, read-only, read-write)
 - Disk size
 - Convert from Standard SKU to Premium and vice-versa (managed disks only)
 - Convert between Standard and Premium by moving .vhd file (un-managed disks)

CONNECTIVITY

Connectivity

- Windows
 - RDP
 - User-based authentication. Generate .rdp file from Azure Portal
 - WinRM
 - Generate a certificate and upload it to Azure Key Vault
 - Reference to the certificate URL in the VM configuration
- Linux
 - SSH
 - User-based or certificate-based authentication
 - SSH client
 - Remote desktop
 - Xfce4
 - Xrdp
- Standalone
 - Serial port connection
 - Boot diagnostics

Connectivity Demo: RDP

The screenshot shows the Azure portal interface for a virtual machine. A red box highlights the 'Connect' button in the top toolbar. A red callout bubble points to this button with the text 'Get Remote Desktop Protocol file (.rdp file)'. The virtual machine details are as follows:

Property	Value
Resource group	Learning (change)
Status	Running
Location	Central US
Subscription	Visual Studio Enterprise (change)
Subscription ID	[Redacted]
Computer name	NISHAN
Operating system	Windows
Size	Basic A0 (1 vcpu, 0.75 GB memory)
Public IP address	[Redacted]
Virtual network/subnet	Learningvnet764/default
DNS name	Configure

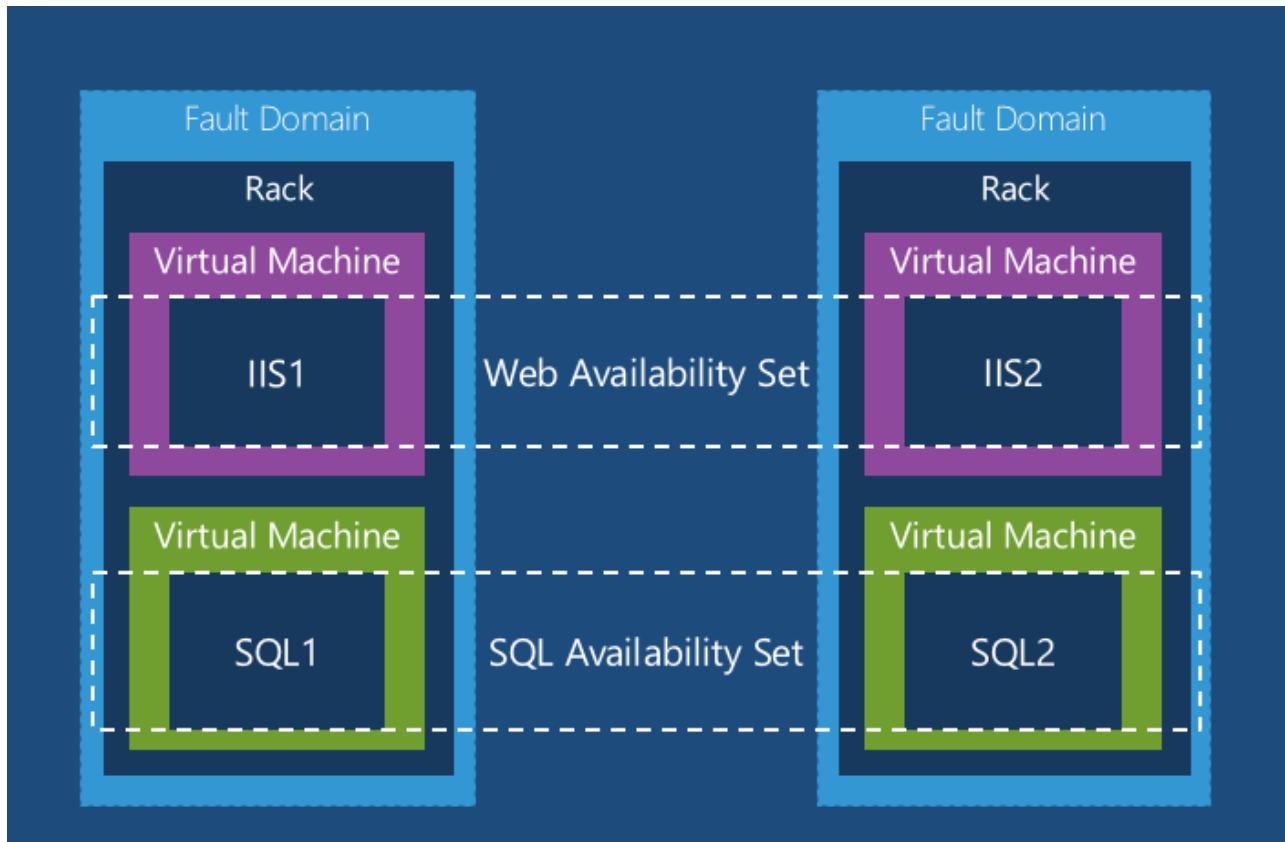

Connectivity Demo: SSH

The screenshot displays the Microsoft Azure portal interface for creating a new virtual machine. The left sidebar contains navigation links: 'Create a resource', 'All services', 'FAVORITES', 'Dashboard', 'All resources', 'Resource groups', 'App Services', 'SQL databases', 'Azure Cosmos DB', and 'Virtual machines'. The main content area shows the 'Create virtual machine' wizard with four steps: 1. Basics (selected), 2. Size, 3. Settings, and 4. Summary. The 'Basics' step is expanded, showing the following configuration options:

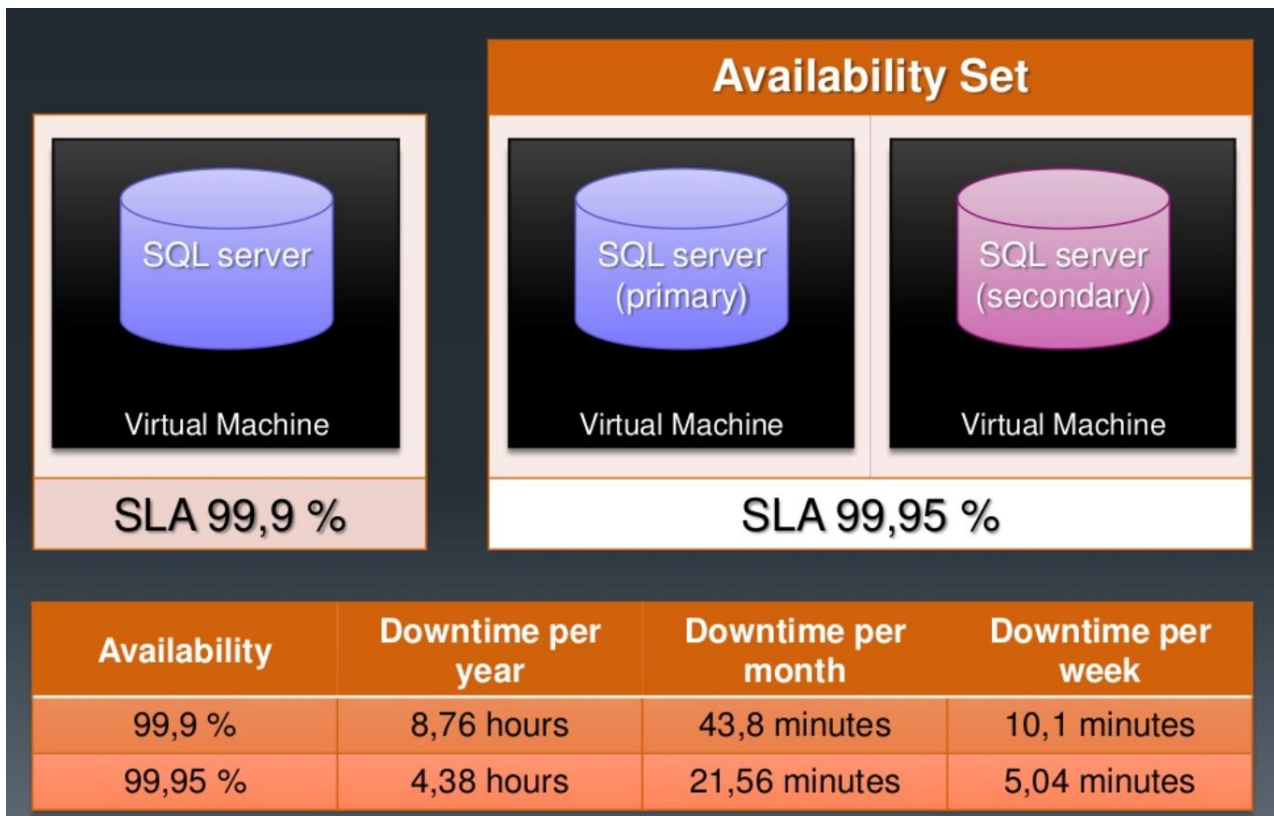

- Name:** A text input field.
- VM disk type:** A dropdown menu set to 'Premium SSD'.
- Username:** A text input field containing 'your-user-name' with a green checkmark.
- Authentication type:** Two buttons, 'SSH public key' (selected) and 'Password'.
- SSH public key:** A text area containing the key 'ssh-rsa AAAAB3NzaC1yc2EAAAABJQAAAQEAnr8kty1MbhxXFsl3Eut3Ah7qpEuP0XHI6yK' with a green checkmark.
- Login with Azure Active Directory (Preview):** A link with an information icon.

AVAILABILITY

Availability

Availability - SLA

SCALABILITY

Scalability

- Vertical scalability
 - Increases VM performance by increasing hardware characteristics
 - Requires temporary downtime:
 - Restart if resizing within the same physical cluster
 - Stop (de-allocate) if resizing requires physical cluster change
- Horizontal scaling
 - VM Scale Sets
 - Auto-scalable
 - Fast
 - Customizable
 - VM extensions

Scale Sets Autoscaling

- Metrics
 - Percentage CPU
 - Network In/Out
 - Disk Read/Write Bytes
 - Disk Read/Write Operations/Sec
 - CPU Credits Remaining/Consumed
- Aggregation
 - Average
 - Minimum
 - Maximum
 - Total
 - Last
 - Count
- Operators
 - Greater than
 - Greater than or equal to
 - Less than
 - Less than or equal to
 - Equal to
 - Not equal to
- Actions
 - Increase count by
 - Increase percent by
 - Increase count to
 - Decrease count by
 - Decrease percent by
 - Decrease count to

Best practices for autoscaling

<https://docs.microsoft.com/en-us/azure/monitoring-and-diagnostics/insights-autoscale-best-practices>

SECURITY

Security - Network Security Groups

- Enables network segmentation and DMZ
- NSG is an Access Control List
 - Filter conditions with allow/deny actions
 - Individual addresses, address prefixes, wildcards
- Associate with VMs or subnets
 - VM NIC
 - Subnet (part of VNet)
- Ingress → Subnet NSG → VM (NIC) NSG → VM
- Egress ← Subnet NSG ← VM (NIC) NSG ← VM

Security rules
1 inbound, 0 outbound

Associated with
0 subnets, 0 network interfaces

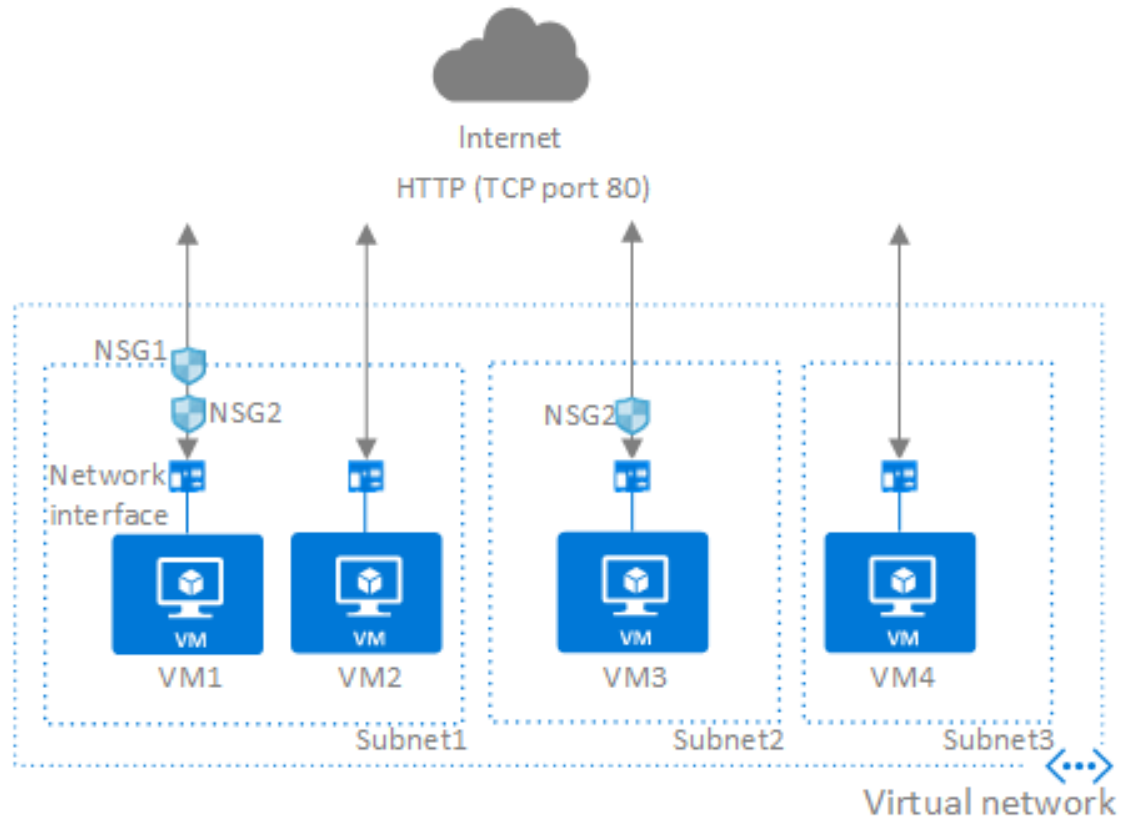

Inbound security rules

PRIORITY	NAME	PORT	PROTOCOL	SOURCE	DESTINATION	ACTION	
1000	 default-allow-ssh	22	TCP	Any	Any	 Allow	...
65000	AllowVnetInBound	Any	Any	VirtualNetwork	VirtualNetwork	 Allow	...
65001	AllowAzureLoadBalancerInBound	Any	Any	AzureLoadBalancer	Any	 Allow	...
65500	DenyAllInBound	Any	Any	Any	Any	 Deny	...

Outbound security rules

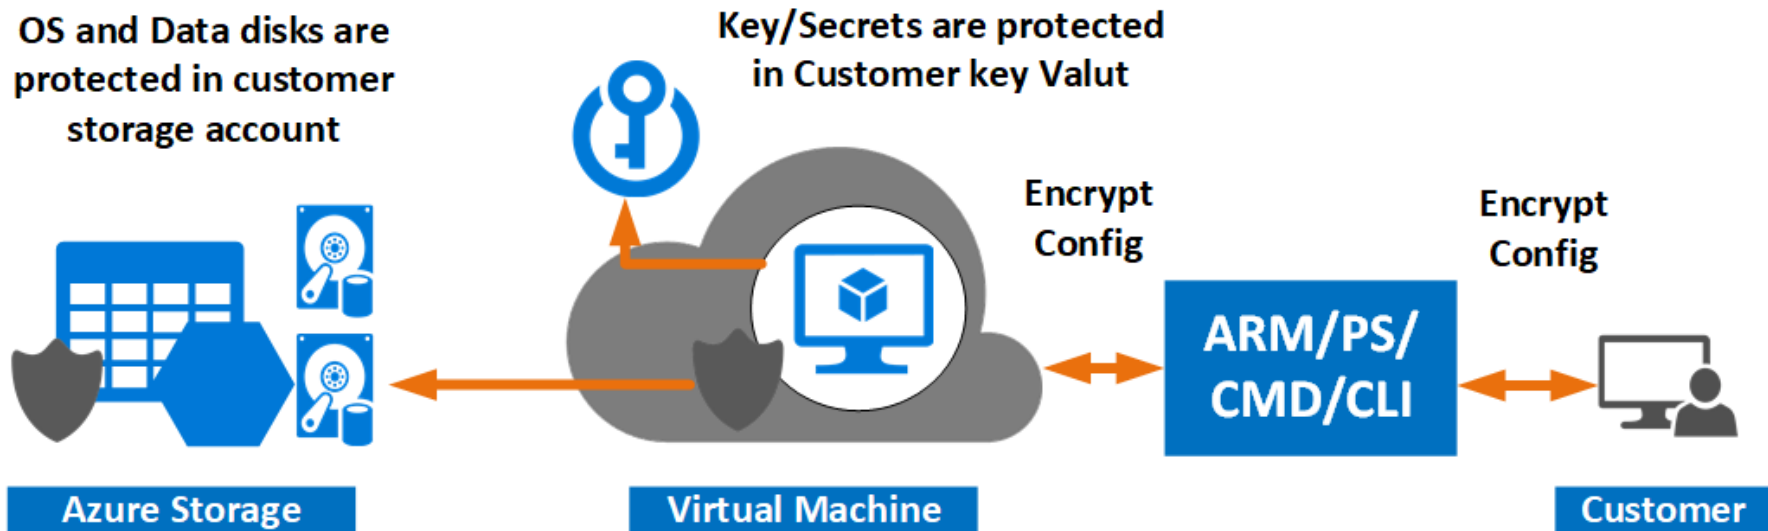

PRIORITY	NAME	PORT	PROTOCOL	SOURCE	DESTINATION	ACTION	
65000	AllowVnetOutBound	Any	Any	VirtualNetwork	VirtualNetwork	 Allow	...
65001	AllowInternetOutBound	Any	Any	Any	Internet	 Allow	...
65500	DenyAllOutBound	Any	Any	Any	Any	 Deny	...

Security – Network Security Groups

Security - Disk encryption

- Azure Disk Encryption leverages existing system-based encryption technologies
 - BitLocker for Windows
 - DM-Crypt for Linux
- Uses Azure Key Vault to store Keys

EXTENSIONS

Azure virtual machine (VM) extensions are small applications that provide post-deployment configuration and automation tasks on **Azure VMs**.

- VM Agent - **default**
- Custom script extension (Windows and Linux)
- Cloud-init (Linux only)
- DSC extension (Windows and Linux)
- Microsoft Antimalware extension
- Azure Diagnostics extension
- Log Analytics extension

MONITORING

Monitoring

- Metrics
 - Internal OS metrics (perfmon)
 - Windows Logs
 - Azure-based resource metrics (Azure Monitor)
 - Raw logs/metrics flow
- Presentation
 - OMS/Log Analytics
 - Azure Monitor
- Alerting/Actions
 - OMS/Log Analytics
 - Azure Monitor
 - Actions
 - Webhook / Automation Runbook / Email / Azure Logic App
